

View Link History

Step 1:

Install the Appvibe AWS Resource Integration app from the Jira Marketplace. Navigate to your Jira project and open the issue where you want to integrate an AWS Resource.

Step 2:

Link the desired AWS Resource to your Jira issue. This can be done by selecting the AWS Resource from the provided list or entering the details manually.

Step 3:

Once the AWS Resource is linked, any modification to this link will be tracked automatically. These modifications include changes in resource configuration, updates to linked data, or removal of the resource link.

Step 4:

Navigate to the history section within the Jira issue to view the modification history of the AWS Resource link. This history is recorded at both the link level and the Jira issue level, ensuring comprehensive tracking.

Step 5:

Access the detailed view of the modification history at any time by clicking on the designated history link. This will provide you with a chronological list of all modifications made to the AWS Resource link.
