View Link History

Step 1:

Begin by installing the Appvibe CircleCI Integration app from the Atlassian Marketplace into your Jira instance. This app facilitates the seamless integration of CircleCI directly within Jira.

Step 2:

After the installation, navigate to any Jira issue where you want to track CircleCI pipeline links. Any changes made to these CircleCI links will now be captured by the app.

Step 3:

Each modification to the CircleCI links is meticulously tracked and stored both at the specific link level and the overall Jira issue level. This ensures you have a detailed history of all interactions.

Step 4:

To view the history of modifications, access the CircleCI integration panel on the Jira issue. Here, you will find a comprehensive log of all changes made to the links associated with that specific issue.

Step 5:

Utilize this history to monitor and audit the evolution of the CircleCI configurations in context with your development activities and project management within Jira.
