# View Link History

## Step 1:

Install the Appvibe Google Drive Integration app within your Jira instance by navigating to the Jira Marketplace. Follow the installation prompts and ensure the app is integrated correctly with both Jira and Google Drive.

## Step 2:

Once installed, access any Jira issue where you would like to integrate Google Drive documents. Use the interface options provided by Appvibe to attach or link Google Drive documents to your Jira issue.

## Step 3:

Any changes you or your team make to the Google Drive link within the Jira issue will be automatically tracked. This includes modifications like renaming, moving, or changing permissions of the document.

## Step 4:

To view the history of changes made to the Google Drive link, navigate within the Jira issue to the section where Appvibe displays the history. Here, you can view all changes at both the link level and Jira issue level, ensuring full transparency and traceability.

## Step 5:

Access the history whenever necessary to review who made specific changes and what modifications were carried out. This feature helps in auditing and understanding the evolution of linked documents over time, improving project management and collaboration.

## Step 6:

Continue using Appvibe to manage your document integrations effectively within Jira, enhancing productivity and trackability of critical documents associated with your developed projects.

# Link Permissions

## Step 1:

Go to the Appvibe Google Drive Integration configuration page, or click permission from within the link settings in a Jira issue.

## Step 2:

Select the desired permissions for each user. Permissions are managed at a system level, and users can be assigned one of the following roles:

- **Viewer:** Users with view permission can see the link in the Jira issue.
- **Editor:** Users with edit permission can add, edit, or remove links in the Jira issue.
- **Admin:** Users with admin permission can manage link permissions for other users.
