Link Permissions

Step 1:

Access the Appvibe Google Forms Integration configuration page or click on "permission" within the link settings in a Jira issue to manage link access.

Step 2:

Control and assign permissions to users for links in a Jira issue. Users can be assigned one of the following permissions:

- **Viewer:** Can see the link in the Jira issue.
- **Editer:** Can add, edit, or remove links in the Jira issue.
- **Admin:** Can manage link permissions for other users.

Select the desired permissions for each user as needed. Note that link permissions are managed at a system level.
