- [View Link History](#)
- [Link Permissions](#)

View Link History

Step 1:

Install the Appvibe Swagger Integration app in your Jira environment. This app is specifically designed to track and manage changes to Swagger links associated with Jira issues.

Step 2:

Once installed, every modification to a Swagger link within a Jira issue is automatically tracked. These changes are stored in the history, which can be accessed either at the individual link level or at the Jira issue level, allowing for easy viewing of past modifications at any time.

Link Permissions

Step 1:

Go to the Appvibe Swagger Integration configuration page or click 'Permissions' from within the link settings in a Jira issue.

Step 2:

Assign permissions to users who will manage or interact with links in the Jira issue:

- **Viewer:** Users will be able to view the link.
- **Editor:** Users will be able to add, edit, or remove links.
- **Admin:** Users will have the ability to manage link permissions for other users.
