

# View Link History

---

## Step 1:

Install the Appvibe Tableau Integration app in your Jira environment. This app facilitates the seamless integration between Jira and Tableau, allowing you to link Tableau reports directly within Jira issues.

## Step 2:

Whenever a Tableau link is added, modified, or removed within a Jira issue, the change is automatically tracked and stored in the history. This tracking can occur at both the Tableau link level and the Jira issue level, ensuring detailed change logs are maintained.

## Step 3:

Access the modification history at any time by navigating to the dedicated history section within your Jira issue. This feature allows users to view past changes, understand how the links have evolved, and identify any potential discrepancies.
