

# View Link History

---

## Step 1:

Install the Appvibe Toggl Integration app from the Jira marketplace. This app is designed to enhance your Jira issues by integrating Toggl functionality for time tracking.

## Step 2:

Once installed, every modification to a Toggl link within a Jira issue is tracked by the app. These modifications are stored in the history, providing a detailed log of changes.

## Step 3:

You can access the history at any time. The history is available at both the link level and the Jira issue level, allowing for comprehensive auditing and review of time tracking activities.

## Step 4:

Utilize this integration to improve project management and increase visibility into time spent on various tasks tracked within Jira issues.
